

# Colored Floor Joint Fillers Are No Longer a Gray Area...

Traditionally, industrial floor joint fillers have only had one color matching criteria, "concrete gray." But as retailers continue to take "industrial" floors into "retail" floor settings, industrial floor joint fillers must now serve two needs; provide durable, long lasting floor joint protection and meet color-specific aesthetic design needs.

As the industry leader in floor joint protection, we take floor joint filler technology seriously, and color matching is no exception. We use a custom blending process and perform multiple color consistency checks during the manufacturing process to ensure that every gallon of material meets the consistent, high quality standards you have come to expect from any Metzger/McGuire product.

To best service the recurring demand from ongoing retail construction programs, we are committed to maintaining strong inventories of MM-80 and Spal-Pro RS 88 in the Gray and Mocha Brown. This helps ensure they are in-stock and ready to ship whenever needed. But our custom color capabilities and product selection extend well beyond these standard colors and products. We can provide most of our industrial floor products in virtually any color desired and will strive to do so with minimum turnaround time and cost.

If you have questions concerning standard or custom colored materials, please contact us at 800-223-MM80 to discuss your individual requirements and we will work with you to provide samples and discuss options and pricing. We hope that you will continue to rely on Metzger/McGuire as your best resource for all of your industrial floor joint protection needs.

# MM-80
